TAKING THE MEDICATION

HOW IT IS GIVEN:

• Imlygic is given by injection directly into a melanoma tumour. The first session is the longest—it will last about 2 hours, so plan accordingly

• A second treatment will be given 3 weeks after the first treatment, and then every 2 weeks after that for as long as you have tumours

• Your oncology team member will decide which tumours to inject and may not inject every tumour at every session

THINGS TO TELL YOUR ONCOLOGY TEAM:

• If you are pregnant or breastfeeding

• If you have a weakened immune system due to an immune deficiency, blood or bone marrow cancer, steroid use, organ or bone marrow transplant, or HIV/AIDS

• If you are taking antiviral medications to treat or prevent herpes, such as acyclovir

• If you are in close contact with someone who has a weakened immune system or is pregnant

HOW TO TAKE IMLYGIC SAFELY (AND NOT SPREAD THE VIRUS):

The Imlygic medication is a modified version of the herpes simplex virus type 1, the virus that causes cold sores.

To prevent the Imlygic virus from spreading to other parts of your body or to your close contacts. (such as people living in your house, caregivers, sex partners, or persons sharing the same bed), you should:

• Avoid any contact between your treatment sites, dressing(s), or body fluids and your close contacts (eg, you should use condoms when engaging in sexual activity and avoid kissing a close contact if you or they have an open mouth sore)

• Wear gloves while putting on or changing your dressing

• Keep treatment sites covered with airtight and watertight dressings for at least 1 week after each treatment (or longer if the treatment site is weeping or oozing)

• If the dressing comes loose or falls off, replace it right away with a clean dressing

• Place all used dressings and cleaning materials in a sealed plastic bag and throw them away in the garbage

• Do not touch or scratch the treatment sites
### TAKING THE MEDICATION

(Continued)

The table below gives you some commonly asked questions and answers about taking IMLYGIC safely:

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>I share a shower/toothbrush/dishes/laundry facilities with other people. Does that pose a transmission risk?</td>
<td>Not unless you have uncovered, draining lesions or leave used dressing materials where others could come in contact with them. All lesions must be covered with an airtight and watertight dressing for 1 week after injection. Draining lesions must remain covered with an airtight and watertight dressing until they are no longer draining. Dressings should be changed once a week.</td>
</tr>
<tr>
<td>My spouse will be changing my dressings. What precautions must he/she take to prevent transmission?</td>
<td>Caregivers should wear protective gloves when assisting patients in applying or changing dressings. Pregnant women and people with weakened immune systems should not serve as caregivers or have contact with wounds or dressings. Caregivers should be instructed to place used dressing materials, gloves, and anything in contact with the wound into a sealed plastic bag. That bag can be disposed of in household waste.</td>
</tr>
<tr>
<td>My pregnant daughter may be changing my dressings. Is that a problem?</td>
<td>Pregnant women and people with weakened immune systems should not change dressings and must avoid contact with the injection site, anything that touches the injection site, and body fluids of patients treated with Imlygic.</td>
</tr>
<tr>
<td>Is it a problem if my lesions are oozing?</td>
<td>Not as long as they remain covered and no one who is pregnant or has a weakened immune system encounters the lesions. Draining lesions must remain covered with an airtight and watertight dressing until they are no longer draining. Dressing should be changed once a week.</td>
</tr>
<tr>
<td>What if my lesions leak onto a counter surface, or a bandage with drainage touches the bathroom vanity? How do I clean it up?</td>
<td>Put on gloves and wipe down the surface with a 1:10 bleach solution (<a href="https://www.verywell.com/make-your-own-disinfectant-solution-998274">https://www.verywell.com/make-your-own-disinfectant-solution-998274</a>). Use disposable materials for wiping, place in a sealed plastic bag, and throw them in the household trash.</td>
</tr>
<tr>
<td>What precautions should my family members or other close contacts and I take to avoid getting herpes?</td>
<td>Household members, caregivers, sex partners, or persons sharing the same bed, pregnant women, and newborns should avoid contact with injected lesions, dressings, injection-site leakage, and body fluids of anyone treated with Imlygic.</td>
</tr>
<tr>
<td>How should I dispose of used dressings, gloves, and cleaning materials?</td>
<td>Place used dressings and cleaning materials into a sealed plastic bag and dispose of in household waste.</td>
</tr>
</tbody>
</table>
If you or your partner becomes pregnant: Tell your oncology team right away if you or your partner becomes pregnant or you think you are pregnant while on this medication, as it may harm a developing baby. Also, remember to use condoms if you are sexually active, not only for birth control but to prevent exposure to body fluids.

Common side effects of this treatment: Even small side effects could be serious and you should report them all to your doctor or nurse. The most common side effects of Imlygic are:

- Flu-like symptoms
  - Chills
  - Fever
  - Aches
  - Tiredness
- Nausea
- Pain at the site of the injection
- Vomiting
- Diarrhoea
- Headache
- Muscle and joint aches
- Pain in legs or arms
NAUSEA/VOMITING
IMLYGIC® (talimogene laherparepvec; T-VEC) for Melanoma

Report immediately to your oncology team

What are the symptoms?
• Upset stomach
• Feeling like you are going to throw up
• Throwing up

What you should tell your oncology team member:
• When your symptoms started and how long they have lasted
• If you have a fever, chills, and/or aches and pains as if you have the flu
• How much and what you have been eating and drinking over the past 24 hours
• If you might have been exposed to food poisoning or a stomach flu

Red flag(s):
• You’ve been throwing up for over a day or there is blood in your vomit
• You have a fever over 40°C
• You faint

Call your oncology team immediately. If no one is available, go directly to the emergency department.

Managing Your Side Effects:
• Take over-the-counter anti-nausea products or any medications prescribed by your oncology team and/or suck on a peppermint candy or chew peppermint gum
• Before your second treatment, take any medications your oncology team has prescribed to prevent vomiting
• Avoid solid foods. Instead eat soft, bland foods such as toast, pudding, rice, oatmeal, or crackers
• Drink water, weak tea, clear broth, watered-down juice, or sports drinks (Gatorade®, Powerade®, and electrolytes, or suck on ice pops to prevent dehydration
FLU-LIKE SYMPTOMS, FEVER WITH OR WITHOUT CHILLS
IMLYGIC® (talimogene laherparepvec; T-VEC)
for Melanoma

Report immediately to your oncology team

What are the symptoms?

<table>
<thead>
<tr>
<th>• Stomach upset/throwing up</th>
<th>• Chills</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Aches and pains</td>
<td>• Tiredness</td>
</tr>
<tr>
<td>• Temperature of 38°C or higher for more than 1 day</td>
<td></td>
</tr>
</tbody>
</table>

What you should tell your oncology team member:

• What your temperature reading is
• When the fever started and how long it has lasted
• If you have any other symptoms, such as chills, stomach upset, vomiting, aches and pains, and feeling tired or just unwell
• How much and what you have been drinking over the past 24 hours
• If you have recently been around people with colds/flus or animals, or if you have travelled nationally or internationally

Red flag(s):

• You’ve been throwing up for over a day or there is blood in your vomit
• If you have a fever over 40 °C
• You faint
• You are dizzy and confused
• Your heart feels like it is racing and you are breathing fast

Call your oncology team immediately. If no one is available, go directly to the emergency department.

Managing Your Side Effects:

• With the approval of your oncology team, take over-the-counter pain relievers such as paracetemol (Panadol®) or ibuprofen (Advil®, Motrin®) every 6 hours until the fever goes away. Don’t take more than 3,000 mg a day of paracetemol or 2,400 mg a day of ibuprofen
• Before your second treatment, take any medications your oncology team has prescribed such as paracetemol or ibuprofen to prevent the flu-like symptoms
• The night of treatment, consider using a heating blanket or multiple blankets to reduce the effect of any chills
• Plan rest periods and some light exercise daily (like walking or yoga) to combat tiredness
• Take a cool or slightly warm bath or put cool compresses or a cold pack on your forehead and neck to bring your fever down
• Use warm packs and heated blankets if you have chills
• Drink water and other liquids such as juice and sports drinks (Gatorade®, Powerade®, and electrolytes) or suck on icypoles to prevent dehydration
HERPES INFECTION
IMLYGIC® (talimogene laherparepvec; T-VEC) for Melanoma

Report immediately to your oncology team

What are the symptoms?

• Canker sores in the mouth, cold sores on the lips, blisters, or any tingling skin lesions in the mouth, on the lips, on the genitals, or on the fingers or ears
• A red, swollen area that is expanding, with or without a fever

What you should tell your oncology team member:

• When you first noticed the skin changes or sores, what they look like, and if they are painful
• If you have flu-like symptoms (eg, fever, chills, stomach upset/throwing up, aches and pains, feeling unwell)
• If you have had any skin problems or herpes infection in the past
• If you have noticed any changes in your vision/eyes (no matter how small), such as eye pain, sensitivity to light, discharge from the eyes, or blurry vision
• If you have weakness in your arms or legs
• If you feel very sleepy
• If you feel foggy or confused

Red flag(s):

• If you have any eye symptoms
• You have sores over a large area
• You have fever, headache, confusion, and are sensitive to light or sound

Call your oncology team immediately. If no one is available, go directly to the emergency department.

Managing Your Side Effects:

• Follow your oncology team member’s instructions for changing the bandage over your injection site. In general, you should keep it covered for 1 week
• Wear gloves when changing your bandage
• Do not touch or scratch the injection site or the bandage or allow anyone else to touch it without gloves

INJECTION-SITE PAIN, SWELLING, OR INFECTION

IMLYGIC® (talimogene laherparepvec; T-VEC)
for Melanoma

Report immediately to your oncology team

What are the symptoms?

- Swelling or pain at the site where you received Imlygic injections
- Redness at the injection site, particularly if the redness appears to be expanding
- Warmth at the injection site
- Blisters
- Skin dimples (indentations)
- Red spots

What you should tell your oncology team member:

- When your symptoms started, how bad they are, and how long they have lasted
- If you also have a fever, what the temperature is, and how long it’s lasted

Red flag(s):

- Swelling, warmth, and redness around the injection site that is expanding quickly and a fever. This could be a sign of an infection called cellulitis

Call your oncology team immediately. If no one is available, go directly to the emergency department.

Managing Your Side Effects:

- As directed by your oncology team, take an anti-inflammatory pain reliever such as acetaminophen (Tylenol®) to reduce pain and swelling
- Apply an ice pack to the area for 15 minutes several times a day
- Keep the swollen area above your heart whenever you can to reduce swelling
- Do not use elastic wrap or tape or otherwise compress the area as that may cause pain
